

React JS

1. What is React?
 - React is library for building UI. [Legacy]
 - React is a library for web and native UI. [Modern]
 - Web refers to Web Applications.
 - Native refers to OS native standalone and distributed applications.
 2. Can we build application using React?
 - No
 - It requires support of frameworks like **Next.JS**
 3. What is difference between React & Angular?
 - React is a library.
 - Angular is a framework.
 4. **React** & React JS both are same.
 5. Angular & Angular JS are different.
 6. Why we need technologies like React, Angular, Vue etc?
 - a) Unified UX
 - b) Fluid UX
 - c) Loosely Coupled and Extensible
- Note: It is possible by using **SPA**.
7. Can we build SPA using Javascript & jQuery?
 - Yes.
 8. What are issues with JS & JQ?
 - Lot of DOM interactions.
 - Lot of BOM interactions
 - Complex DOM manipulations
 - Heavy on UI
 - Slow rendering
 9. What are the features of React?
 - a) It is component based.
 - Easy to reuse
 - Easy to extend
 - Cleanly separated
 - Easy to test and maintain.
 - b) It uses virtual DOM.

Summary

- HTML, CSS, Javascript, Bootstrap
- What is React?

- How it is different from Angular?
- Why we need React?
- SPA
- Issues with Javascript & jQuery.

FAQ: How browser works?**FAQ: How HTML Works in Browser? [HTML Parsing]****FAQ: What is DOM?****Features of React:**

1. Component Based
2. It uses Virtual DOM
3. One way data binding
4. Modular Approach

Setup Environment for React:

1. Download and Install **Node JS** on your PC

<https://nodejs.org/>

- Node JS is a Javascript runtime.
- It is used by developers for building Web Applications, Servers, Scripts & CLI tools.
- It provides a package manager called **NPM**.
[Yarn, Bower, RubyGEMS, NuGet, Composer, NPM..]

2. Verify from your command prompt or terminal

```
> node -v          22+ version of Node
> npm -v           10+ version of NPM
```

3. Download and Install Visual Studio Code Editor

<https://code.visualstudio.com/download>

4. Install following extensions for VS Code

- Live Server
- Live Preview
- IntelliSense for CSS class names in HTML
- vscode-icons
- ESLint

Setup Account “on”

- GIT
- Google Stitch
- Magnific
- Canva
